Collibra Data Lineage

Visualize your enterprise data movement, transformation and consumption

Gain visibility across your data ecosystem to quickly spot dependencies, proactively minimize risks and meet regulatory compliance requirements

Struggling with fragmented governance across multiple systems and clouds? Worried about mounting risks from AI adoption? In your complex data landscape, you need clear visibility into data movements and transformations. The lack of end-to-end visibility slows down projects, creates compliance risks and makes it impossible to scale data (or AI) initiatives safely.

Collibra Data Lineage unifies governance across your entire ecosystem by automatically mapping data movement and transformations. Our AI-powered platform delivers automated visibility, context and control through the entire data lifecycle. Now, you can accelerate all your data and AI use cases, safely. And maintain end-to-end visibility of all your data.
