Collibra for Public Sector

Support warfighter and business operations with data, analytics and AI accessibility, trust and transparency

Federal agencies operate in a complex and regulated landscape, with petabytes of data residing over disparate sources and varying legacy environments. Because of this, government employees are often unable to easily find, understand or gain confidence in the data they need to do their job. This inability, due to a lack of data governance, transparency and traceability of data, can adversely impact the ability to serve constituents and warfighter missions in a timely, efficient and secure manner.

To address this, the Federal Data Strategy and the Foundations for Evidence-based Policymaking Act provide a framework to help make data available, accessible, reusable and shareable. This requires the implementation of a rigorous data governance and management strategy that accounts for all data assets created, collected, controlled and maintained by each agency.

Collibra Platform, a FedRAMP certified solution, accelerates data and AI for government departments and agencies faced with complex data challenges. Collibra unifies governance for data and AI across on-premises, hybrid and multi-cloud environments, engages every user and group, and creates the safety and autonomy needed for scaling data and AI across every use case.

Unified governance for data and AI

Collibra enables government departments and agencies with complex data challenges, hybrid data ecosystems, and big ambitions for data and AI, to accelerate data and AI use cases while ensuring data accessibility, adoption and security. Combating fragmented governance and visibility across their data ecosystem, government leaders utilize Collibra to unify governance for data and AI for every system, source and user. Unlike other solutions, Collibra offers the only complete, FedRAMP certified platform to provide automated visibility, context, and control and enriches data context with every use. For the first time, civilian, military, and intelligence communities can accelerate every data and AI use case safely, confidently and with well–understood data.

The Office of the Secretary of Defense relies on Collibra to help find, understand and trust their data, ultimately empowering and enabling better decision-making for more than 100k+ users across the department.

Collibra helps enable data accessibility, adoption, and security while quickly scaling cross-functional data and AI solutions to support warfighter and business operations.

Enhance public services

- Proactive citizen engagement
- Service delivery optimization
- Citizen feedback analysis

Optimize operational efficiency

- Infrastructure management
- Resource allocation optimization
- Process automation

Drive innovation and digital transformation

- "Smart" initiatives
- AI-driven analytics
- Digital services expansion

Promote transparency and accountability

- Open data initiatives
- Streamline financial management and reporting
- Public accountability

Deliver trusted AI and enhance privacy

- Identity management
- Regulatory compliance for data and AI
- Access control policy management

Collibra Platform: A complete platform that provides automated visibility, context and control

Data Governance
Increase transparency into the data landscape to maximize usage while minimizing risk

Data Lineage
Visualize how data flows, transforms and is used across the data landscape

AI Governance
Out-of-the-box NIST AI RMF to catalog, assess and monitor any AI use case to deliver trusted and valuable AI

Data Notebook
Query and collaborate around data for enhanced understanding

Data Catalog
Deliver insights faster with automated discovery and curation

Data Privacy
Automate the enforcement of data privacy while assessing regulatory risks

Data Quality & Observability
Resolve data quality issues before they impact the business with automated monitoring, validation and notification

Protect
Define data access policies and automate enforcement to protect sensitive data

Ensure data accessibility, adoption and security today
