Collibra

Collibra for Insurance

Confidently deliver data and AI to reduce risk, enhance customer experience and expedite claims

Whether you're an underwriter, broker or reinsurer, the data challenges faced within the insurance industry continue to mount. Fragmented data from legacy systems, data quality issues, laws, regulations, security, privacy and tremendous volumes of unstructured data all lead to reduced efficiency and worse yet, poor customer experiences.

To overcome these challenges insurance companies are taking cutting-edge approaches to unifying governance for data and AI while providing trusted, high-quality data that serves the needs of employees and consumers. By making both data and AI secure, easily accessible and trustworthy, you'll drive innovation, deliver superior customer experiences and ensure adherence with regulations including Solvency II, IFRS-17, GDPR and more.

Collibra Data Intelligence Platform accelerates data and AI for organizations faced with complex data challenges. Collibra unifies governance for data and AI across every system and source, engages every user and department, and creates the safety and autonomy needed for scaling data and AI across every use case.

Unified Governance for Data and AI

Collibra enables insurance organizations with complex data challenges, hybrid data ecosystems, and big ambitions for data and AI, to accelerate data and AI use cases while ensuring compliance and reducing risk. Tired of struggling with fragmented governance and visibility across their data ecosystem, global insurance leaders utilize Collibra to unify data and AI governance for every system and source, engaging users from across their organization including underwriters, brokers, reinsurers and others. Unlike other solutions, Collibra offers the only complete platform to provide automated visibility, context and control and enriches data context with every use. For the first time, insurers can accelerate every data and AI use case safely, confidently and with well–understood data.

> **Collibra has played an important role in our journey to build data transparency within our organization. It helps our users connect the dots and support our desired self-service model, eliminating the need for a middleman and allowing them to focus on their real work.**
